Welcome to Conservancy Kids!

Become a junior scientist, exploring the natural world, asking questions, and making discoveries. Join us for an adventure that will take you outdoors, around the house, and into the incredible Sonoran Desert.

Welcome to Conservancy Kids! We're excited to see you!

What is a science notebook?

All great scientists carry a field notebook with them—to write down the cool stuff they find so they can remember it later. Each person’s notebook will look different. There’s no right or wrong way to use your notebook. Some helpful information you can include are the date, drawings of what you see, text, maps, weather, and location. Put down anything that helps you remember what you saw and discovered. Let’s make our own scientific notebook so we’re ready to do science anywhere!

Let’s be a scientist!

Scientists are really good at observing the world around them, asking questions about what they see, and investigating in order to understand things better. Now that you have your science notebook, let’s investigate how water moves over different surfaces and use what we see to help us understand water movement in the natural world. Check out the video and lesson plan below!

Nicole Kallman, Education Manager
Nicole loves science and exploration. In college, she studied physics and biology. Now, she shares her excitement about science with others, encouraging everyone to follow in the footsteps of Miss Frizzle: “take chances, make mistakes, and get messy!”
nicole@mcdowellsonoran.org

Luke Challis
Luke loves science and being out and about in nature! He studies a lot about biology, ways of thinking, and philosophy. Luke also loves to teach and encourage kids and adults to always keep learning.
