STINKNET INVASIVE WEED!

Stinknet is a new invasive weed spreading in Arizona

- Stinknet grows in the winter and flowers in late winter through spring
- Stinknet dies in summer, leaving behind dried brush covered with seeds
- Stinknet seed is tiny and lightweight, easily moved on clothing, pets, and vehicles
- Dried stinknet can fuel wildfires
- Some people experience dermatitis or respiratory allergies from stinknet
- Stinknet is common in the Phoenix area, help stop its spread across Arizona!
- Stinknet is native to South Africa. It is a weed in California and elsewhere

What you can do:

Stinknet can be killed by many kinds of herbicide – always follow label instructions

Stinknet is easiest eliminated when it is young

Stop stinknet before it makes seed!

Consider pulling, weed-whacking, or hoeing stinknet seedlings, but stop if you experience allergy symptoms

Issued in furtherance of Cooperative Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture, Edward C. Mearns, Statistician Director, Extension, Division of Agriculture, Life and Veterinary Sciences, and Cooperative Extension, The University of Arizona.

The University of Arizona is an equal opportunity, affirmative action institution. The University does not discriminate on the basis of race, color, religion, sex, national origin, age, disability, veteran status, sexual orientation, gender identity, or genetic information in its programs and activities.
